A1.11

communicate ideas, using appropriate language and a variety of formats

A1.12

use appropriate graphic modes of representation

B3.3

explain the links between specialized cells, tissues, organs, and systems in plants and animals

B3.5

explain the interaction of different systems within an organism and why such interactions are necessary for the organism's survival

Plant Poster

While plants are simpler than animals, they still rely on different tissues working together to function.

Your assignment is to draw a poster of a **generalized plant**, with exploded views showing a *minimum* of the following cross-sections:

■ stem

■ leaf

■ root

Each cross-section should show how the cells are arranged in tissues. The function of each tissue in that part of the plant should be briefly explained. After looking at your poster, someone should have a basic understanding of how plants function.

Note: showing more cross-sections is allowed.

Format: your poster should be 11" x 17".
